Gerard Ferey

Crystal Chemistry: From Basics to Tools for Materials Creation Gerard Ferey

Devoted to a diverse group of solid state scientists, the book has two objectives, both relating to structural chemistry: (i) a progressive analytic familiarization with the main parameters that govern the organization of crystallized matter and related crystal structures, (ii) a study of what are the various ways to 'read' a structure far beyond its representation in scientific articles. Hence, the reader will, from numerous examples illustrated in color, analyze what are the main characteristics of these structures, from their geometric characteristics, their coordination polyhedra, their connections with the resulting dimensionalities of these solids, including also the defects they exhibit, before looking at possibilities to classify structures, within which recurrence laws can emerge.

Chemists are required to understand the potentials of a new structure for becoming future materials scientists. The first part of the book is by no means a database for known structures, but facilitates a progressive understanding of the organization of the solid state. With these tools in hand, the reader is invited in the later part of the book to analyze new structures, and to also use new concepts for viewing structures in a more synthetic way for the future. Such new vision is already leading to the creation of completely new solids with outstanding characteristics that find applications in societal problems concerning energy, energy savings, environment and health.

The contents is not exclusively academic but relates to the creation of innovative materials, through a more physical approach, that might condition the future of materials. Readership: Undergraduate and graduate students in solid state sciences, coordination chemists and physicists.

From reader reviews:

Annie Hendricks:

Do you have favorite book? When you have, what is your favorite's book? Publication is very important thing for us to understand everything in the world. Each book has different aim or maybe goal; it means that guide has different type. Some people sense enjoy to spend their a chance to read a book. They may be reading whatever they consider because their hobby is actually reading a book. How about the person who don't like reading through a book? Sometime, man feel need book after they found difficult problem as well as exercise. Well, probably you will want this Crystal Chemistry: From Basics to Tools for Materials Creation.

Ida Torres:

The book Crystal Chemistry: From Basics to Tools for Materials Creation give you a sense of feeling enjoy for your spare time. You can utilize to make your capable a lot more increase. Book can being your best friend when you getting tension or having big problem with your subject. If you can make looking at a book Crystal Chemistry: From Basics to Tools for Materials Creation to be your habit, you can get considerably more advantages, like add your capable, increase your knowledge about a number of or all subjects. You can know everything if you like open up and read a reserve Crystal Chemistry: From Basics to Tools for Materials Creation. Kinds of book are a lot of. It means that, science book or encyclopedia or other individuals. So , how do you think about this book?

Elizabeth Branch:

Reading can called head hangout, why? Because when you are reading a book mainly book entitled Crystal Chemistry: From Basics to Tools for Materials Creation your brain will drift away trough every dimension, wandering in every single aspect that maybe not known for but surely might be your mind friends. Imaging each and every word written in a book then become one application form conclusion and explanation this maybe you never get ahead of. The Crystal Chemistry: From Basics to Tools for Materials Creation giving you one more experience more than blown away your thoughts but also giving you useful information for your better life on this era. So now let us show you the relaxing pattern here is your body and mind will probably be pleased when you are finished reading it, like winning a game. Do you want to try this extraordinary investing spare time activity?

Glenn Pryor:

Is it anyone who having spare time then spend it whole day by means of watching television programs or just lying on the bed? Do you need something totally new? This Crystal Chemistry: From Basics to Tools for Materials Creation can be the respond to, oh how comes? A fresh book you know. You are thus out of date, spending your extra time by reading in this new era is common not a nerd activity. So what these guides have than the others?
