Contouring: A Guide to the Analysis and Display of Spatial Data (Computer Methods in the Geosciences)

D. Watson

Contouring: A Guide to the Analysis and Display of Spatial Data (Computer Methods in the Geosciences) D. Watson

This unique book is the key to computer contouring, exploring in detail the practice and principles using a personal computer. Contouring allows a three dimensional view in two dimensions and is a fundamental technique to represent spatial data. All aspects of this type of representation are covered including data preparation, selecting contour intervals, interpolation and gridding, computing volumes and output and display.

Formulated for both the novice and the experienced user, this book initially conducts the reader through a step by step explanation of PC software and its application to personal data, and then presents the rationale and concepts for contouring using the computer.

Accompanying the book is a set of BASIC programs, in ASCII format, on an MS-DOS 360KB floppy disk. These programs implement eighteen interpolation methods, five gradient estimation techniques, and seven types of display, and are designed to be adapted or combined to suit a wide range of possible objectives concerning either the comparative study of contouring methodology or the practical production of contour displays.

From reader reviews:

Richard Endsley:

Throughout other case, little folks like to read book Contouring: A Guide to the Analysis and Display of Spatial Data (Computer Methods in the Geosciences). You can choose the best book if you appreciate reading a book. Given that we know about how is important the book Contouring: A Guide to the Analysis and Display of Spatial Data (Computer Methods in the Geosciences). You can add knowledge and of course you can around the world with a book. Absolutely right, simply because from book you can learn everything! From your country until eventually foreign or abroad you will be known. About simple matter until wonderful thing you may know that. In this era, you can open a book as well as searching by internet gadget. It is called e-book. You may use it when you feel bored to go to the library. Let's study.

Bobby McCabe:

Reading a book can be one of a lot of activity that everyone in the world adores. Do you like reading book thus. There are a lot of reasons why people enjoy it. First reading a guide will give you a lot of new info. When you read a e-book you will get new information mainly because book is one of several ways to share the information or their idea. Second, looking at a book will make anyone more imaginative. When you reading through a book especially fictional works book the author will bring you to imagine the story how the character types do it anything. Third, you could share your knowledge to some others. When you read this Contouring: A Guide to the Analysis and Display of Spatial Data (Computer Methods in the Geosciences), you can tells your family, friends and also soon about yours e-book. Your knowledge can inspire the others, make them reading a publication.

Johnnie Lewis:

The particular book Contouring: A Guide to the Analysis and Display of Spatial Data (Computer Methods in the Geosciences) has a lot details on it. So when you read this book you can get a lot of profit. The book was authored by the very famous author. The writer makes some research previous to write this book. This particular book very easy to read you can find the point easily after perusing this book.

Terry Smith:

Reading a publication make you to get more knowledge from it. You can take knowledge and information from the book. Book is written or printed or descriptive from each source that filled update of news. With this modern era like at this point, many ways to get information are available for you. From media social including newspaper, magazines, science reserve, encyclopedia, reference book, fresh and comic. You can add your knowledge by that book. Ready to spend your spare time to spread out your book? Or just searching for the Contouring: A Guide to the Analysis and Display of Spatial Data (Computer Methods in the Geosciences) when you desired it?
