Interdisciplinary Treatment Planning: Comprehensive Case Studies Michael Cohen

Volume I of Interdisciplinary Treatment Planning paved the way to a higher level of proficiency in case planning by introducing and illustrating essential principles employed by master clinicians in their quest for predictability and excellence. Each contributor's section concluded with a treatment planning case for readers to undertake, testing their true understanding of the principles introduced in that chapter. This second volume takes readers to the next important step: learning by repetition through the presentation of additional cases treated by master clinicians from every specialty. Each is introduced by the clinician, who provides the rationale for choosing the particular case, a suggested focus in treatment plan design, key elements to consider when planning the case, and what the reader can expect to learn from the process. The case presentations follow the format established in the first volume: Diagnostic findings and pretreatment images are presented first to allow the reader to develop a treatment plan, then the master clinician's proposed treatment plan and account of actual treatment provided are detailed, accompanied by treatment and posttreatment images. Continuing the innovative educational approach of the bestselling first volume, this book provides the opportunity to learn through the experience of developing comprehensive treatment plans under the guidance of master clinicians.
