The Fullerenes: New Horizons for the Chemistry, Physics and Astrophysics of Carbon

The study of carbon has been revolutionized since the discovery of the soccerball shaped C₆₀ molecule Buckminsterfullerene. This book examines the modern study of the chemistry, physics and astrophysics of carbon, through contributions from leading workers in the subject. It includes a history of the origins of a soccerball structure for the C₆₀ molecule and a section on its discovery and production. It then looks at the theory and the astrophysics and chemistry of the material. These contributions result from a meeting held at the Royal Society in October 1992. The contributions formerly appeared in the Philosophical Transactions of the Royal Society.
