Alexander A. Kaminskii

Laser Crystals: Their Physics and Properties (Springer Series in Optical Sciences) Alexander A. Kaminskii

It was a greatest pleasure for me to learn that Springer-Verlag wished to produce a second edition of my book. In this connection, Dr. H. Lotsch asked me to send him a list of misprints, mistakes, and inaccuracies that had been noticed in the first edition and to make corresponding corrections without disturbing the layout or the typography too much. I accepted this opportunity with alacrity and, moreover, found some free places in the text where I was able to insert some concise, up-to-date information about new lasing compounds and stimulated emission channels. It was also possible to increase the number of reference citations. The reader of the second edition hence has access to more complete data on insulating laser crystals. However, sections on laser-crystal physics have not been updated, because a satisfactory description of the progress made in the last ten years in this field would have required the sections to be extended enormously or even a new book to be written. Moscow, July 1989 ALEXANDER A. KAMINSKII Preface to the First Edition The greatest reward for an author is the feeling of satisfaction he gets when it becomes clear to him that readers find his work useful. After my book appeared in the USSR in 1975 I received many letters from fellow physicists including colleagues from Western European countries and the USA.

From reader reviews:

Eva Velasco:

Have you spare time for just a day? What do you do when you have more or little spare time? Yep, you can choose the suitable activity regarding spend your time. Any person spent their own spare time to take a walk, shopping, or went to the actual Mall. How about open or perhaps read a book called Laser Crystals: Their Physics and Properties (Springer Series in Optical Sciences)? Maybe it is to be best activity for you. You realize beside you can spend your time along with your favorite's book, you can more intelligent than before. Do you agree with it is opinion or you have different opinion?

Robert Ford:

The ability that you get from Laser Crystals: Their Physics and Properties (Springer Series in Optical Sciences) is a more deep you rooting the information that hide in the words the more you get thinking about reading it. It doesn't mean that this book is hard to know but Laser Crystals: Their Physics and Properties (Springer Series in Optical Sciences) giving you buzz feeling of reading. The writer conveys their point in particular way that can be understood by simply anyone who read the item because the author of this e-book is well-known enough. This particular book also makes your own personal vocabulary increase well. So it is easy to understand then can go along with you, both in printed or e-book style are available. We highly recommend you for having that Laser Crystals: Their Physics and Properties (Springer Series in Optical Sciences) instantly.

Maxine Whitley:

This book untitled Laser Crystals: Their Physics and Properties (Springer Series in Optical Sciences) to be one of several books that will best seller in this year, this is because when you read this guide you can get a lot of benefit into it. You will easily to buy this book in the book retail outlet or you can order it by means of online. The publisher with this book sells the e-book too. It makes you quicker to read this book, since you can read this book in your Smartphone. So there is no reason for your requirements to past this book from your list.

Jackie Armstrong:

Don't be worry should you be afraid that this book will filled the space in your house, you may have it in e-book way, more simple and reachable. This Laser Crystals: Their Physics and Properties (Springer Series in Optical Sciences) can give you a lot of pals because by you investigating this one book you have issue that they don't and make you actually more like an interesting person. This specific book can be one of a step for you to get success. This reserve offer you information that maybe your friend doesn't learn, by knowing more than different make you to be great persons. So , why hesitate? We need to have Laser Crystals: Their Physics and Properties (Springer Series in Optical Sciences).
