The subject of deformity and disability in the ancient Greco-Roman world has experienced a surge in scholarship over the past two decades. Recognizing a vast, but relatively un(der)explored, corpus of evidence, scholars have sought to integrate the deformed and disabled body back into our understanding of ancient society and culture, art and representation. *The Hunchback in Hellenistic and Roman Art* works towards this end, using the figure of the hunchback to re-think and re-read images of the 'Other' as well as key issues that lie at the very heart of ancient representation.

The author takes an art-historical approach, examining key features of the corpus of hunchbacks, as well as representations of the deformed and disabled more generally. This provides fertile ground for a re-assessment of current, and likewise marginalized, scholarship on the miniature in ancient art, hyperphallicism in ancient art, and the emphasis on the male body in ancient art.
