Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics)

Michael E. Schuckers

Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics) Michael E. Schuckers
Biometrics, the science of using physical traits to identify individuals, is playing an increasing role in our security-conscious society and across the globe. Biometric authentication, or bioauthentication, systems are being used to secure everything from amusement parks to bank accounts to military installations. Yet developments in this field have not been matched by an equivalent improvement in the statistical methods for evaluating these systems.

Compensating for this need, this unique text/reference provides a basic statistical methodology for practitioners and testers of bioauthentication devices, supplying a set of rigorous statistical methods for evaluating biometric authentication systems. This framework of methods can be extended and generalized for a wide range of applications and tests.

This is the first single resource on statistical methods for estimation and comparison of the performance of biometric authentication systems. The book focuses on six common performance metrics: for each metric, statistical methods are derived for a single system that incorporates confidence intervals, hypothesis tests, sample size calculations, power calculations and prediction intervals. These methods are also extended to allow for the statistical comparison and evaluation of multiple systems for both independent and paired data.

Topics and features:

* Provides a statistical methodology for the most common biometric performance metrics: failure to enroll (FTE), failure to acquire (FTA), false non-match rate (FNMR), false match rate (FMR), and receiver operating characteristic (ROC) curves
* Presents methods for the comparison of two or more biometric performance metrics
* Introduces a new bootstrap methodology for FMR and ROC curve estimation
* Supplies more than 120 examples, using publicly available biometric data where possible
* Discusses the addition of prediction intervals to the bioauthentication statistical toolset
* Describes sample-size and power calculations for FTE, FTA, FNMR and FMR

Researchers, managers and decisions makers needing to compare biometric systems across a variety of metrics will find within this reference an invaluable set of statistical tools. Written for an upper-level undergraduate or master's level audience with a quantitative background, readers are also expected to have an understanding of the topics in a typical undergraduate statistics course.

Dr. Michael E. Schuckers is Associate Professor of Statistics at St. Lawrence University, Canton, NY, and a member of the Center for Identification Technology Research.

From reader reviews:

Paul Howell:

What do you in relation to book? It is not important to you? Or just adding material when you really need something to explain what your own problem? How about your extra time? Or are you busy individual? If you don't have spare time to accomplish others business, it is make you feel bored faster. And you have time? What did you do? Every person has many questions above. The doctor has to answer that question simply because just their can do which. It said that about reserve. Book is familiar in each person. Yes, it is correct. Because start from on guardería until university need this particular Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics) to read.

Daniel Scholz:

Are you kind of busy person, only have 10 or 15 minute in your time to upgrading your mind proficiency or thinking skill actually analytical thinking? Then you are experiencing problem with the book than can satisfy your short time to read it because all this time you only find book that need more time to be go through. Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics) can be your answer because it can be read by anyone who have those short free time problems.

Sharon Scott:

With this era which is the greater individual or who has ability to do something more are more special than other. Do you want to become considered one of it? It is just simple way to have that. What you are related is just spending your time almost no but quite enough to enjoy a look at some books. One of the books in the top checklist in your reading list will be Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics). This book that is certainly qualified as The Hungry Inclines can get you closer in turning into precious person. By looking up and review this guide you can get many advantages.

Roberta Haile:

As we know that book is very important thing to add our know-how for everything. By a reserve we can know everything we want. A book is a range of written, printed, illustrated as well as blank sheet. Every year ended up being exactly added. This guide Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics) was filled about science. Spend your free time to add your knowledge about your technology competence. Some people has distinct feel when they reading some sort of book. If you know how big advantage of a book, you can feel enjoy to read a reserve. In the modern era like today, many ways to get book which you wanted.
