## **Semiconductor Physical Electronics (Microdevices) Sheng S. Li**

The purpose of this book is to provide the reader with a self-contained treatment of fundamental solid state and semiconductor device physics. The material presented in the text is based upon the lecture notes of a one-year graduate course sequence taught by this author for many years in the Department of Electrical Engineering of the University of Florida. It is intended as an introductory textbook for graduate students in electrical engineering. However, many students from other disciplines and backgrounds such as chemical engineering, materials science, and physics have also taken this course sequence, and will be interested in the material presented herein. This book may also serve as a general reference for device engineers in the semiconductor industry. The present volume covers a wide variety of topics on basic solid state physics and physical principles of various semiconductor devices. The main subjects covered include crystal structures, lattice dynamics, semiconductor statistics, energy band theory, excess carrier phenomena and recombination mechanisms, carrier transport and scattering mechanisms, optical properties, photoelectric effects, metal-semiconductor devices, the p-n junction diode, bipolar junction transistor, MOS devices, photonic devices, quantum effect devices, and high speed III-V semiconductor devices. The text presents a unified and balanced treatment of the physics of semiconductor materials and devices. It is intended to provide physicists and materials scientists with more device backgrounds, and device engineers with a broader knowledge of fundamental solid state physics.

### From reader reviews:

#### **Pearl McLean:**

What do you with regards to book? It is not important to you? Or just adding material when you require something to explain what the ones you have problem? How about your time? Or are you busy person? If you don't have spare time to do others business, it is give you a sense of feeling bored faster. And you have free time? What did you do? Everyone has many questions above. They should answer that question due to the fact just their can do that will. It said that about e-book. Book is familiar in each person. Yes, it is correct. Because start from on jardín de infancia until university need this particular Semiconductor Physical Electronics (Microdevices) to read.

#### **Christopher Hunnicutt:**

Is it you actually who having spare time and then spend it whole day through watching television programs or just laying on the bed? Do you need something totally new? This Semiconductor Physical Electronics (Microdevices) can be the respond to, oh how comes? A book you know. You are consequently out of date, spending your time by reading in this fresh era is common not a geek activity. So what these books have than the others?

#### **Joel Faulkner:**

You can get this Semiconductor Physical Electronics (Microdevices) by check out the bookstore or Mall. Just simply viewing or reviewing it could possibly to be your solve problem if you get difficulties for ones knowledge. Kinds of this publication are various. Not only by written or printed but also can you enjoy this book by means of e-book. In the modern era such as now, you just looking of your mobile phone and searching what your problem. Right now, choose your personal ways to get more information about your publication. It is most important to arrange you to ultimately make your knowledge are still change. Let's try to choose correct ways for you.

#### **Raymond Blalock:**

As a pupil exactly feel bored to reading. If their teacher inquired them to go to the library or even make summary for some publication, they are complained. Just small students that has reading's internal or real their interest. They just do what the educator want, like asked to go to the library. They go to at this time there but nothing reading significantly. Any students feel that examining is not important, boring in addition to can't see colorful pics on there. Yeah, it is to be complicated. Book is very important for you. As we know that on this time, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. Therefore , this Semiconductor Physical Electronics (Microdevices) can make you really feel more interested to read.
