Thomas Duriez, Steven Brunton, Bernd R. Noack

Machine Learning Control - Taming Nonlinear Dynamics and Turbulence (Fluid Mechanics and Its Applications) Thomas Duriez, Steven Brunton, Bernd R. Noack

This is the first textbook on a generally applicable control strategy for turbulence and other complex nonlinear systems. The approach of the book employs powerful methods of machine learning for optimal nonlinear control laws. This machine learning control (MLC) is motivated and detailed in Chapters 1 and 2. In Chapter 3, methods of linear control theory are reviewed. In Chapter 4, MLC is shown to reproduce known optimal control laws for linear dynamics (LQR, LQG). In Chapter 5, MLC detects and exploits a strongly nonlinear actuation mechanism of a low-dimensional dynamical system when linear control methods are shown to fail. Experimental control demonstrations from a laminar shear-layer to turbulent boundary-layers are reviewed in Chapter 6, followed by general good practices for experiments in Chapter 7. The book concludes with an outlook on the vast future applications of MLC in Chapter 8. Matlab codes are provided for easy reproducibility of the presented results. The book includes interviews with leading researchers in turbulence control (S. Bagheri, B. Batten, M. Glauser, D. Williams) and machine learning (M. Schoenauer) for a broader perspective. All chapters have exercises and supplemental videos will be available through YouTube.

From reader reviews:

Joyce Adam:

Have you spare time for just a day? What do you do when you have much more or little spare time? That's why, you can choose the suitable activity to get spend your time. Any person spent all their spare time to take a move, shopping, or went to the particular Mall. How about open or even read a book eligible Machine Learning Control - Taming Nonlinear Dynamics and Turbulence (Fluid Mechanics and Its Applications)? Maybe it is to get best activity for you. You already know beside you can spend your time along with your favorite's book, you can smarter than before. Do you agree with it is opinion or you have other opinion?

Michael Scott:

What do you concentrate on book? It is just for students because they're still students or the item for all people in the world, what best subject for that? Simply you can be answered for that query above. Every person has several personality and hobby for each other. Don't to be pushed someone or something that they don't wish do that. You must know how great and important the book Machine Learning Control - Taming Nonlinear Dynamics and Turbulence (Fluid Mechanics and Its Applications). All type of book could you see on many options. You can look for the internet sources or other social media.

Linda Williams:

Many people spending their time by playing outside having friends, fun activity along with family or just watching TV the whole day. You can have new activity to enjoy your whole day by looking at a book. Ugh, do you think reading a book can really hard because you have to bring the book everywhere? It ok you can have the e-book, bringing everywhere you want in your Smartphone. Like Machine Learning Control - Taming Nonlinear Dynamics and Turbulence (Fluid Mechanics and Its Applications) which is keeping the e-book version. So , try out this book? Let's observe.

Jessica Harris:

A lot of guide has printed but it differs from the others. You can get it by internet on social media. You can choose the top book for you, science, comedian, novel, or whatever simply by searching from it. It is known as of book Machine Learning Control - Taming Nonlinear Dynamics and Turbulence (Fluid Mechanics and Its Applications). You can add your knowledge by it. Without departing the printed book, it could add your knowledge and make you actually happier to read. It is most essential that, you must aware about guide. It can bring you from one place to other place.
